STRATEGIC PARTNERSHIPS Executive Update • Fintech Integration

# Bridging Tradition and Innovation

For months, the message coming through our customer feedback surveys, support logs, and branch conversations was unmistakably clear.

Account holders loved the security and personal relationships at Legacy Trust Bank, but they were growing increasingly frustrated by digital speed bumps. Business owners spoke of waiting days for simple credit approvals, while everyday app users pointed to complex interfaces and rigid transfer windows compared to modern standalone apps.

> *"We trust you with our money, but we need our banking tools to keep up with our lives."*

Instead of dismissing these concerns, Legacy Trust Bank chose an active, forward-looking path: opening our doors to Ghana's sharpest fintech innovators to systematically solve these friction points in real time.

The direct result of these strategic partnerships is a smoother, significantly faster banking experience designed around actual user requests.

> **Money transfers, procurements, and credit approvals are now instant across all accounts.**

Loan decisions that once took days are cleared in minutes, and real-time proactive alerts help customers manage payments long before deadlines approach.

## Security First

Addressing customer concerns about transaction speed did not mean cutting corners on protection.

One of our non-negotiable priorities when selecting fintech partners was ensuring bank-grade security, regulatory compliance, and strict data privacy at every step.

## Zero-Trust Tokenization

Legacy Trust utilizes a state-of-the-art zero-trust architecture and cryptographic token system.

Third-party software engines analyze encrypted data streams to render instant approvals or financial forecasts, but your personal identifiers, account numbers, and passwords never leave the bank's secure vault.

## The New Standard

**Instant Approvals**

Credit and procurement decisions finalized in seconds via secure APIs.

**Tokenized Isolation**

Zero raw customer data is shared with or stored on external fintech servers.

**Frictionless Interface**

A refreshed mobile and web experience built entirely around customer workflow.

By listening closely to customer concerns and building bridges with agile tech partners, Legacy Trust Bank is proving that tradition and innovation don't have to compete—they work together to serve you better.
